

ENLOE “Magnet High School of America” | Raleigh, North Carolina

Enloe High School is a 2300 student school serving grades 9-12. It was identified as the “Magnet High School of America” and has received numerous supportive educational awards for achievement.

Dr. Hill was the educational futurist and facility planner for this renovation and remodeling project. His goal was to “Raise the Bar” for educational achievement beyond the current national standard. He provided the site master plan and educational program specifications for design that lead to advancements in:

- Shared use with the Wake County Medical Center
- Creation of the “Learning Atrium” for integration of curriculum and technology

The final solution was substantially below the original budget because of FH&A creative use of space, accurate size programming, and understanding of the educational curriculum and schedule.

Total building size was approximately 270,000 GSF.
