Large Screen Science Projection Video & Lab Station Computers

Snoqualmie Valley's Mt. Si High School was the nation's first high school planned for large screen projection video technology in a science laboratory. Computers are also networked to lab stations and also project information on the large screen. This unique application is accomplished in a remodeled science laboratory and was funded through grants provided by the Weyerhaeuser Timber Company.

Creating Schools as “Learning Tools”

Emerging technologies, particularly in the use of science based peripherals, allows students to measure information around the school itself. Creative thinking in ceiling heights, plumbing, solar panels, and natural ventilation can make the school into a “Learning Tool”.
