

SCARSDALE HIGH SCHOOL And SCARSDALE MIDDLE SCHOOL | Scarsdale, New York

Facility planning to both of these facilities included remodeling and renovation of new instructional technologies and review and analysis of building utilization for future educational trends. The high school science and mathematics programs are particularly well recognized for their academic achievement resulting in high levels of student placement in Ivy League and nationally recognized colleges.

The middle school master plan provided one of the most complete functional design frameworks for small learning communities for this age group. It is a model for middle school program and design and was presented to the National Middle School Association at their annual conference. Going beyond the traditional clustering of core subjects, the final solution also included guidance, special needs students, drama, and even small dining areas.

The middle school solution has applications for middle school education world-wide. It was based on Dr. Hill's planning framework developed on earlier projects with Susan Gillette, Past Executive Director, National Middle School Association.
